

## ABSTRACT

The human genome contains tens of thousands of gene loci which code for an even greater number of protein and RNA products. The highly complex temporal and spatial expression of these genes makes possible all the biological processes of life. Altered gene expression by mutation or deregulation is fundamental for the development of many human diseases. The ultimate aim of this thesis was to identify gene expression changes relevant to cancer. The advent of genome-wide expression profiling techniques, such as microarrays, has provided powerful new tools to identify such changes and researchers are now faced with an explosion of gene expression data. Processing, comparing and integrating these data present major challenges. I approached these challenges by developing and assessing novel methods for cross-platform analysis of expression data, scalable subspace clustering, and curation of experimental gene regulation data from the published literature. I found that combining results from different expression platforms increases reliability of coexpression predictions. However, I also observed that 'global' correlation between platforms was generally low, and few gene pairs reached reasonable thresholds for 'high-confidence coexpression'. Therefore, I developed a novel subspace clustering algorithm, able to identify coexpressed genes in experimental subsets of very large gene expression datasets. Biological assessment against several metrics indicates that this algorithm performs well. I also developed a novel meta-analysis method to identify consistently reported genes from differential expression studies when raw data are unavailable. This method was applied to thyroid cancer, producing a ranked list of significantly over-represented genes. Tissue microarray analysis of some of these candidates and others identified a number of promising biomarkers for diagnostic and prognostic classification of thyroid cancer. Finally, I present ORegAnno ([www.oreganno.org](http://www.oreganno.org)), a resource for the community-driven curation of experimentally verified regulatory sequences. This resource has proven a great success with ~30,000 sequences entered from over 900 publications by ~50 contributing users. These data, methods and resources contribute to our overall understanding of gene regulation, gene expression, and the changes that occur in cancer. Such an understanding should help identify new cancer mechanisms, potential treatment targets, and have significant diagnostic and prognostic implications.

## BIOGRAPHICAL NOTES

Born: March 7, 1978, Winnipeg, MB, Canada  
Academic Studies: B.Sc. (Honours), University of Winnipeg, 2002

## GRADUATE STUDIES

Field of Study: Cancer informatics

### Courses

MEDG505	Genome Analysis	<b>Instructors</b>	Drs. S. Jones & P. Hieter
MEDG520	Advances in Human Molecular Genetics		Dr. R. McMaster
MEDG530	Advanced Human Genetics		Dr. J. Friedman
MEDG545	Current Topics in Genomics		Dr. A. Brooks-Wilson
MEDG548A	Directed Studies		Dr. S. Jones
MBB829	Special Topics in Bioinformatics		Dr. F. Pio
BIOL535	Teaching and Learning in Life Sciences		Drs. E. Rosenberg & J. Berger

### AWARDS

2007	Lloyd Skarsgard Research Excellence Prize
2006-2008	MSFHR Senior Trainee Award
2005-2008	CIHR Canada Graduate Scholarship Doctoral Award
2004	CIHR National Poster Competition Award of Excellence (Silver)
2004	Albert B. and Mary Steiner Summer Research Award
2003	UBC Graduate Entrance Scholarship
2003-2005	MSFHR Junior Trainee Award
2003-2005	NSERC PGS-A Award

International Workshop on Encoding Information in DNA Sequence. Okinawa, Japan. Feb. 2005.

#### SUPERVISORY COMMITTEE

Dr. Steven Jones, Research Supervisor (Medical Genetics)

Dr. Marco Marra (Medical Genetics)

Dr. Angela Brooks-Wilson (Medical Genetics)

Dr. Isabella Tai (Medicine, Gastroenterology division)

Dr. Francis Ouellette (Medical Genetics)

#### PROGRAMME

The Final Oral Examination  
For the Degree of

DOCTOR OF PHILOSOPHY  
(Medical Genetics)

OBI L. GRIFFITH

B.Sc. (Honours), University of Winnipeg, 2002

Wednesday, April 2, 2008, 9:00am  
Room 200, Graduate Student Centre

**“Identification of Gene Expression Changes in Human Cancer Using Bioinformatic Approaches”**

#### EXAMINING COMMITTEE

Chair:

Dr. William Mohn (Microbiology and Immunology)

Supervisory Committee:

Dr. Steven Jones, Research Supervisor (Medical Genetics)

Dr. Angela Brooks-Wilson (Medical Genetics)

University Examiners:

Dr. George Mackie (Biochemistry and Molecular Biology)

Dr. Michael Murphy (Microbiology and Immunology)

External Examiner:

Dr. Stephan Beck

UCL Cancer Institute

University College London

London

United Kingdom
